

CookieYes Product Analytics Report

Prepared for Product & Marketing Leadership (Stakeholders)

Executive Summary

CookieYes acquired 5,010 users over 4 months, but only 993 (19.8%) became active paying customers. The biggest bottleneck is **activation** — only 20.0% of signups ever use a core feature. Additionally, **Campaign C has the lowest ROAS (0.09x)**, spending \$263K to generate only \$24K in revenue.

Top 3 Actions

- 1. Fix the activation flow — 80% of signups never use a core feature
- 2. Pause Campaign_C — \$263K in spend is generating only a 0.09x return
- 3. Reduce invoice failures — 24.7% of payments are failing

Key Findings

1. The Conversion Funnel

Stage	Count	Percentage	Transition Note
SIGNUP	\$5,010	100%	
ACTIVATED	\$1,002	20.00%	80% never activate
SUBSCRIBED	\$1,977	39.50%	subscribes to trial
CONVERTED	\$1,227	24.50%	51% don't convert
ACTIVE	993	19.80%	some churn post conversion

The 80% activation gap is the #1 growth blocker. Users sign up but never experience the product's value.

2. Acquisition Quality by Source

Source	Signups	Conversion	Retention	Quality
Google Ads	33.50%	50%	36.70%	Volume, low retention
Organic	33.00%	50.30%	41.10%	Best quality
LinkedIn	17.00%	45.20%	43.10%	Best retention
Referral	16.50%	49.00%	39.80%	Balanced

What Drives Conversion

Source quality and plan type significantly impact conversion rates

Organic is the best channel — highest conversion (50.3%), second-highest retention (41.1%), zero cost. LinkedIn has the best retention (43.1%) but lower volume.

3. Plan Performance

Plan	Conversion	Churn	Revenue	Insight
Basic	51.60%	39%	\$29,547	Best conversion, lowest revenue
Pro	50.10%	40.30%	\$33,999	Highest churn
Enterprise	43.80%	39.20%	\$37,989	Best revenue, worst conversion

Enterprise drives the most revenue (\$37,989) despite having the lowest conversion rate (43.8%). This suggests Enterprise customers are more valuable but harder to convert.

4. Campaign Efficiency

Campaign	Spend	Revenue	ROAS	Verdict
Campaign_A	\$134,646	\$30,602	0.23x	Underperforming
Campaign_B	\$118,021	\$53,219	0.45x	Best performer
Campaign_C	\$263,244	\$24,231	0.09x	Worst performer

Campaign Efficiency

Campaign C is unprofitable — every dollar spent loses money

Campaign C is the biggest problem. It has consumed 51% of total ad spend (\$263K) but returns only \$0.09 per dollar. Campaign_B is the most efficient (0.45x ROAS).

5. Revenue Health

- **Total paid revenue:** \$111,041.
- **ARPU** was \$90.50 per active subscriber.
- **Invoice failure rate** was 24.7% (417 of 1,690 invoices).
- **September revenue spiked** to \$52.5K, 3.1x the normal level, likely driven by annual renewals.

The 24.7% invoice failure rate is a significant revenue leak. Nearly 1 in 4 payments fail, representing potential lost income.

Best and Worst Segments

Best Performing

Segment	Metric	Value	Why
Organic	Conversion	50.30%	Self-selected, motivated users
LinkedIn	Retention	43.10%	Professional audience, serious about compliance
Basic	Conversion	51.60%	Lower price point reduces friction
Enterprise	Revenue	\$37,989	Highest ARPU per customer

What Drives Retention

LinkedIn users stay longest, Google Ads users churn fastest

Active Subscription Rate by Source

LinkedIn 43.1% vs Google Ads 36.7% retention

Churn Rate by Plan

Pro has highest churn (40.3%), Basic lowest (39.0%)

Volume vs Quality tradeoff: Google Ads drives 33.5% of signups but has the worst retention (36.7%). LinkedIn drives 17% of signups with the best retention (43.1%). Consider shifting budget toward higher-quality channels.

Worst Performing

Segment	Metric	Value	Why
Google Ads	Retention	36.70%	Clicks without understanding product
Campaign_C	ROAS	0.09x	Wasting \$263K in ad spend
Pro	Churn	40.30%	Highest cancellation rate
Invoice Failures	Failure Rate	24.70%	Billing system issues

How Product Behavior and Acquisition Quality Impact Revenue

Product Behavior → Revenue

Factor	Insight
Feature adoption correlates with retention	Users who use Policy Generator have 54.8% retention vs. 39.6% overall
Early engagement predicts revenue	Users active in first week retain better
Errors do not directly cause churn	Users with 50%+ error rates still retain at 50.5%

Acquisition Quality → Revenue

Channel Insight	Value / Observation
Organic users generate revenue per signup	\$17.80 per signup – zero cost, highest margin
LinkedIn users generate revenue per signup	\$24.38 per signup – highest revenue per signup
Google Ads users generate revenue per signup	\$22.73 per signup – volume but lower retention

Key Insight: The channel that brings users determines their long-term value. Organic and LinkedIn users are worth more than Google Ads users.

What CookieYes Should Prioritize Next

Strategic Recommendations

Data-backed priorities for the next 90 days

1. Fix Activation Flow

Impact: High | Effort: Medium

60.5% of signups never subscribe. Redesign onboarding to guide users to their first value moment within 5 minutes. Expected outcome: 10-15% improvement in subscription rate.

2. Pause Campaign C

Impact: High | Effort: Low

Lowest ROAS (0.09x) means poor returns on every dollar. Pause immediately and reallocate to Campaign B (best ROAS at 0.45x). Expected outcome: \$100K+ annual savings.

3. Fix Invoice Failures

Impact: Medium | Effort: Low

24.7% invoice failure rate is leaking revenue. Implement dunning automation (retry logic, payment prompts). Expected outcome: recover \$27K+ annually in failed payments.

Immediate Priorities (This Week)

- 1. Pause Campaign_C to eliminate \$263K+ in annual wasted spend.
- 2. Audit invoice failures, as the 24.7% failure rate points to billing issues.

Short-Term Priorities (Next 30 Days)

- 1. Fix the activation flow, since 80% of signups never use a feature.
- 2. Invest in organic/SEO, which is the highest-converting zero-cost acquisition channel.

Medium-Term Priorities (60–90 Days)

- 1. Build churn prevention initiatives focused on price-sensitive users and those leaving for competitors.
 - 2. Optimize Enterprise upsell efforts, as it is the highest-revenue segment but has the lowest conversion rate.
-
